PREFACE

The End Result Productions Live Sound Division is committed to providing high quality sound services for shows, parties, and other events requiring sound systems in the Philadelphia area.

Coming from a background of DIY-style organizing, we know what it's like to perform through speakers that don't do justice to the quality of your music. That's why we're here to help. We offer two options of sound coverage and will gladly work with you in order to determine what solution is most appropriate for your event.

Pricing is modest, but assessed on a case-by-case basis. We guarantee that you will not find similar sound services in the area within our price range, and we are willing to take the needs of your budget into consideration.

SOLUTION 1: STAGE COVERAGE

Speaker placement at two points of the room. Recommended for performances of live bands.

What we will provide:

- One friendly sound technician to oversee your event from start to finish
- One 2x15" speaker on each side of the performance area, a Peavey PV215
- One 18" subwoofer on each side of the performance area, a Peavey SP118
- One Crown XTi 1000 amplifier, to supply 1,400 W of power to the subwoofers
- One Samson S2000 amplifier, to supply 1,020 W of power to the main speakers
- One mixer of 14 channels, a Peavey PV14
- One 98 ft. XLR snake of 8 channels, a Stellar Labs 555-13861
- One active DI box, an ART DualXDirect
- All required cabling for the speakers
- More than enough instrument cables and XLR cables for the performers

SOLUTION 2: TOTAL COVERAGE

Speaker placement at four points of the room. Recommended for events of electronic music.

What we will provide:

- Two friendly sound technicians to oversee your event from start to finish
- One 2x15" speaker on each side of the performance area, a Peavey PV215
- One 18" subwoofer on each side of the performance area, a Peavey SP118
- One Crown XTi 1000 amplifier, to supply 1,400 W of power to the subwoofers
- One Samson S2000 amplifier, to supply 1,020 W of power to the main speakers
- One 18" subwoofer centered in the back of the room, a dB DVA S10DP
- One 15" speaker on each side of the back of the room, an EV ZLX-15P
- One mixer of 24 channels, a Mackie 2404-VLZ3
- One 98 ft. XLR snake of 8 channels, a Stellar Labs 555-13861
- One active DI box, an ART DualXDirect
- All required cables for the speakers
- More than enough instrument cables and XLR cables for the performers
